Sequence 637, Application US/09081646

Patent No. 6333152

GENERAL INFORMATION:

APPLICANT: Kinzler, Kenneth

APPLICANT: Zhang, Lin

APPLICANT: Zhang, Lin

APPLICANT: Chang, Lin

TITLE OF INVENTION: Gene Expression Profiles in No. 6333152mal and

TITLE OF INVENTION: Gene Expression Profiles in No. 6333152mal and

TITLE OF INVENTION: Gene Expression Profiles in No. 6333152mal and

TITLE OF INVENTION: Gene Expression Profiles in No. 6333152mal and

TITLE OF INVENTION: Gene Expression Profiles in No. 6333152mal and

TITLE OF INVENTION: Cancer Cells

TITLE NETRING DATE: 1998-05-20

EARLIER APPLICATION NUMBER: 60/047,352

EARLIER FILING DATE: 1997-05-21

NUMBER OF SEQ ID NOS 871

SOFTWARE: FastSEQ for Windows Version 3.0

Patent No. 585461

GENERAL INFORMATION:
APPLICANT: Colote, Soudhir
APPLICANT: Pirotzky, Eduardo
TITLE OF INVENTION: Oligonucleotides to Inhibit the
TITLE OF INVENTION: Expression of Isopremyl Protein Transferases
NUMBER OF SQUENCES: 36
CORRESPONDENCE ADDRESS:
ADDRESSE: Lucas & Just
STRETT: 205 E. 42nd Street
CITY: New York
STATE: New York
COUNTRY: USA
ZIP: 10017
COMPUTER READABLE FORM:
MEDIUM TYPE: 1.44 MB storage
COMPUTER: IBM 466 Compatible
COMPUTER: IBM 466 Compatible
COMPUTER: IBM 466 Compatible
COMPUTER: 1.44 MB storage
COMPUTER: 1.44 MB 10025 5.0
CURRESTEICATION NUMBER: USA 1.4
APPLICATION NUMBER: USA 1.4
APPLICATION NUMBER: GB 9413035.8
FILING DATE: 23-JUNE-1994
INPORMATION FOR SEQ ID NO: 6:
SEQUENCE CHARACTERISTICS:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              US-09-326-186B-86/c

US-09-326-186B-86/c

Sequence 86, Application US/09326186B

Patent No. 6319906

GENERAL INFORMATION:
APPLICANT: Bennett, Clarence Frank
APPLICANT: Wickers, Timothy A.
TITLE OF INVENTION: Oligonuclectide Compositions and Methods for the
TITLE OF INVENTION: Modulation of the Expression of B7 Protein
FILE REPRENCE: ISPH-0376
CURRENT APPLICATION NUMBER: US/09/326,186B
CURRENT APPLICATION NUMBER: US/09/326,186B
CURRENT APPLICATION NUMBER: 08/777,266
PRIOR PILING DATE: 1996-12-31
NUMBER OF SEQ ID NOS: 226
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NO 86
LENGTH: LENGTH: 11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

Sequence 107, Application US/09281418
Patent No. 6287769
GENERAL INFORMATION:
APPLICANT: Income, Takakazu
TITLE OF INVENTION: Method of Amplifying DNA Fragment, Apparatus for Amplifying DNA
TITLE OF INVENTION: agment, Method of Assaying Microorganisms, Method of Analyzing M
TITLE OF INVENTION: niems and Method of Assaying Contaminant
FILE REPERENCE: 9982-7
CURRENT APPLICATION NUMBER: US/09/281,418
                                                                                                                                                                                                                                        Sequence 87, Application US/08777266A
Patent No. 6077833

Sequence 4, Application US/08152955;
Patent No. 54748910;
GENERAL INFORMATION:
APPLICANT: Weiss, Arthur
APPLICANT: Praser, James
ITILE OF INVENTION: of Immunosuppressive Drugs
TITLE OF INVENTION: of Immunosuppressive Drugs
NUMBER OF SEQUENCES: 5
CORRESPONDENCE ADDRESS:
ADDRESSEE: Townsend and Townsend
STREET: One Market Plaza, Steuart Tower, Suite 2000
CITY: San Francisco
CITY: San Francisco
STATE: Galifornia
COUNTRY: USA
ZIP: 94105

                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 25, Application US/09281418

Patent No. 6287769

GENERAL INFORMATION:

APPLICANT: Incue, Takakazu

APPLICANT: Incue, Takakazu

TITLE OF INVENTION: agment, Method of Assaying Microorganisms, Method of Analyzing Mi

TITLE OF INVENTION: agment, Method of Assaying Contaminant

TITLE OF INVENTION: agment, Method of Assaying Contaminant

TITLE OF INVENTION: agment, Method of Assaying Contaminant

FILE REFERENCE: 9982-7

CURRENT APPLICATION NUMBER: US/09/281,418

CURRENT FILING DATE: 1999-03-30

EARLIER APPLICATION NUMBER: UF/1998/87651

EARLIER FILING DATE: 1999-03-16

SEQ ID NOS: 216

SEQ ID NOS: 216

SEQ ID NOS: 216

SED ID NOS: 216

Sequence 3, Application US/08468057A;
Parent No. 5565535;
GENERAL INFORMATION:
APPLICANT: Orth, Gerard
APPLICANT: Streek, Rolf
ITILE OF INVENTION: DNA Sequences Derived from the Genome of
ITILE OF INVENTION: the Papillomavirus HPV39, Their Use in In Vitro Diagnosis;
ITILE OF INVENTION: and for the Production of an Immunogenic Composition:
NUMBER OF SEQUENCES: 11
CORRESPONDENCE ADDRESS:
ADDRESSEE: Finnegan, Henderson, Farabow, Garrett &

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MESULT 110
US-08-488-551B-662

Sequence 662, Application US/08488551B
Patent No. 601561
GENERAL INFORMATION:
APPLICANT: Nicholas J. Deacon
APPLICANT: David Cooper
TITLE OF INVENTION:
NON-PATHOGENIC STRAINS OF HIV-1
TITLE OF SEQUENCES: 841
CORRESPONDENCE ADDRESS:
ADDRESSER: SCULLY, SCOTT, MURPHY & PRESSER
STREET: 400 GANDEN CITY PLAZA
CITY: GARDEN CITY
COUNTRY: U S.A.
ZIP: 11530-029
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC COMPATIBLE
OOPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentTn PC-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DB 1; Length 10;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1; Indels

COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/09/547,422
MOLECULE TYPE: other nucleic acid
BESCRIPTION: /desc = "primer for third quarter;
HYPOTHETICAL: NO
SEQUENCE DESCRIPTION: SEQ ID NO: 55:
US-08-459-444-55
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 INSECTICIDAL ACTIVITY IN MAIZE

; Sequence 107, Application US/09281418
; Patent No. 6287769
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               INFORMATION FOR SEQ 1D NO: 35:
SEQUENCE CHARACTERISTICS:
LENGTH: 11 base pairs
TYPE: nucleic acid
STRANDEDNESS: single
                                                                                               Query Match
Best Local Similarity 75.0%;
Matches 6; Conservative
STRANDEDNESS: single
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           15 ACAGGGAG 22
                                                                                                                                                                                    15 ACAGGGAG 22
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 ACAGGGRR 8
                                                                                                                                                                                                                       1 ACAGGGRR 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 g
                                                                                                                                                                                      à

Sequence 25. Application US/09281418
| Sequence 25. Application US/09281418
| Patent NO. 628769
| GENERAL INFORMATION:
| APPLICANT: Inoue, Takakazu
| TITLE OF INVENTION: Method of Assaying Microorganisms, Method of Assaying Microorganisms, Method of Analyzing N
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION: nisms and Method of Assaying Contaminant
| TITLE OF INVENTION
APPLICANT: Inoue, Takakazu

TITLE OF INVENTION: Method of Amplifying DNA Fragment, Apparatus for Amplifying DNA
TITLE OF INVENTION: agment, Method of Assaying Microorganisms, Method of Analyzing N
TITLE OF INVENTION: nisms and Method of Assaying Microorganisms, Method of Analyzing N
TITLE OF INVENTION: nisms and Method of Assaying Contaminant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        16 CAGGGAG 22
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               US-08-331-397B-37
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 12, Application US/08605163
Patent No. 587988
GENERAL INFORMATION
APPLICANT: Moso, Tommaso
APPLICANT: Tosi, Mario
APPLICANT: Verpy, Blisabeth
APPLICANT: Werby, Blisabeth
APPLICANT: Machol
TITLE OF INVENTION: Method for Detecting Molecules
TITLE OF INVENTION: Containing Nucleotide Mismatches and the Location of Base
TITLE OF INVENTION: Substitutions or Deletions in Nucleotide Sequences.
NUMBER OF SEQUENCES: 22
CORRESPONDENCE ADDRESS:
ADDRESSEE: Punner

Patent No. 6015661

GENERAL INFORMATION:

APPLICANT: Nicholas J. Deacon
APPLICANT: David Cooper
TITLE OF INVENTION: NON-PATHOGENIC STRAINS OF HIV-1
NUMBER OF SEQUENCES: 841
CORRESPONDENCE ADDRESS:

GITY: GARDEN CITY SCOTT, MURPHY & PRESSER
STREET: 400 GARDEN CITY PLAZA
CITY: GARDEN CITY PLAZA
CITY: GARDEN CITY
STATE: NEW YORK
COUNTRY: U.S.A.
ZIP: 11530-0299
COMPUTER REAABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM YORK
COUNTRY: U.S.A.
ZIP: 11530-0299
COMPUTER: IBM FC-DOS/MS-DOS
SOFTWARE: PATENTIN Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
